
Concurrence and local asymmetry as independent coordinates: $\sqrt{p_A p_B} = C/2$, $\eta = \sqrt{p_A/p_B}$
(a) physical region; $C \to 1$ forces $\eta \to 1$
symmetric locus
$\eta = \sqrt{p_A/p_B}$
C
(b) Φ_U^A vs C at fixed local asymmetry
($\Delta = 2$, $p_A = C\eta/2$)
$\eta = 1.0$
$\eta = 1.4$
$\eta = 2.0$
$\eta = 3.0$
Φ_U^A/π
C
(c) asymmetry vanishes on $\eta = 1$
η
C
$(\Phi_U^A - \Phi_U^B)/\pi$
