

Concurrence of the entangled PACS: $C = 2\mu\nu\sqrt{(1 - g_\alpha^2)(1 - h_\beta^2)}/N^2$

(a) balanced symmetric: $C = \frac{1-q}{1+q}$

(b) $C(\mu, \alpha)$, $(m, n) = (0, 2)$, $\beta = \alpha$

(c) unequal amplitudes, balanced $\mu = \nu$
